

DIY Green Pool Rescue

BUY NOW – Green Pool Treatment Pack and follow the instructions below.

Apart from looking grim and uninviting, a green pool is unhealthy for you and your pool equipment. It needs to be 'rescued' as soon as possible - you can DIY with ease or call us for assistance.

The most effective way to remedy your pool is through a shock and algacide treatment, we recommend a measured dose of [BioGuard Burn Out Extreme](#) supplemented with [MSA Extreme](#) is a double action attack – eradicating algae swiftly and successfully. Our Green Pool Rescue Pack is the most cost-effective solution.

(Note: Never drain a pool without seeking your pool manufacturer's advice first - it could 'pop' out of the ground and be totally destroyed!)

Today:

1. Balance your pool water – using test strips or test kit, ensure the pH is between 7.4 and 7.6, and Total Alkalinity is in range 80-120ppm – add balancing products as appropriate.
2. Empty Skimmer baskets of debris
3. Empty Lint pot of debris
4. Backwash and rinse filter (or clean cartridge filters using [BioGuard Filter Brite](#))
5. Set pump to be operational 24hours per day
6. Shock/oxidise your pool if you have product available
7. For Salt Pools – increase chlorine output on controller.

Green Pool Rescue Pack DIY Instructions:

Day One

8. Balance your pool water – ensure the pH is between 7.4 and 7.6, and Total Alkalinity is in range 80-120ppm
9. Empty Skimmer baskets of debris
10. Empty Lint pot of debris
11. Backwash and rinse filter (or rinse cartridge filters)
12. Ensure pump is operational 24hours per day
13. Add [BioGuard Burnout Extreme](#) – 1pkt to 50,000l of water via skimmer (or 2 packets – see colour guide below)
14. Trickle [MSA Extreme Algacide](#) around full perimeter of pool 100mls per 10,000l of water

Day Two

1. Morning: Balance your pool water – ensure the pH is between 7.4 and 7.6, and Total Alkalinity is in range 80-120ppm
2. Ensure Free Chlorine is 3 or higher
3. Empty Skimmer baskets of debris
4. Empty Lint pot of debris
5. Scrub walls and floor with brush on pole or set robotic pool cleaner for long cycle.
6. Afternoon: Vacuum pool to waste (if no robotic cleaner)
7. Backwash and rinse filter (or rinse cartridge filters)
8. Add [Super clear clarifying tablet](#) into skimmer (1 tablet per 50,000l)

If pool is still green/cloudy

9. Add [BioGuard Burnout Extreme](#) – 1pkt to 50,000l of water via skimmer (or 2 packets – see colour guide below)

Day Three

1. Morning: Balance your pool water – ensure the pH is between 7.4 and 7.6, and Total Alkalinity is in range 80-120ppm
2. Ensure Free Chlorine is 3 or higher
3. Empty Skimmer baskets of debris
4. Empty Lint pot of debris
5. Scrub walls and floor with brush on pole or set robotic pool cleaner for long cycle.
6. Afternoon: Vacuum pool to waste (if no robotic cleaner)
7. Backwash and rinse filter (or clean cartridge filters using [BioGuard Filter Brite](#))
8. Add [Super clear clarifying tablet](#) into skimmer (1 tablet per 50,000l)

Day Four

If pool is still cloudy

1. Morning: Balance your pool water – ensure the pH is between 7.4 and 7.6, and Total Alkalinity is in range 80-120ppm
2. Ensure Free Chlorine is 3 or higher
3. Empty Skimmer baskets of debris
4. Empty Lint pot of debris
5. Scrub walls and floor with brush on pole or set robotic pool cleaner for long cycle.
6. Add [BioGuard Burnout Extreme](#) – 1pkt to 50,000l of water via skimmer (or 2 packets – see colour guide below)
7. Trickle [MSA Extreme Algaecide](#) around full perimeter of pool 100mls per 10,000l of water
8. Afternoon: Vacuum pool to waste (if no robotic cleaner)
9. Backwash and rinse filter (or clean cartridge filters using BioGuard Liquid Brite)
10. Add [Super clear clarifying tablet](#) into skimmer (1 tablet per 50,000l)

Repeat Day Three until clear.

When pool is clear:

1. Follow instructions on [BioGuard Filter Brite](#) to clean sand/glass filter media
2. Turn pump back to correct daily duration – approx. 10 hours summer, 4 hours winter
3. Consider the addition of [BioGuard Pool Complete](#) or [BioGuard Optimiser](#) for sparkling, clear, healthy water.
4. Remember, all of this can be avoided by following our [3 Step Program](#); the most cost-effective way to keep your pool healthy, sparkling clear and free of algae!

Light Green/Teal Coloured Water - This indicates a low level of algae and will require the basic shock formula above. Add one bag of [BioGuard Burn Out Extreme](#) to every 50,000L of pool water plus the addition of [algaecide](#).

Green Or Dark Green - This generally signifies a medium amount of algae in the water. Requiring more than one treatment. Add two bags of [BioGuard Burn Out Extreme](#) to every 50,000L of pool water plus the addition of [algaecide](#).

Black/Brown-Green Water - At this point, it would be recommended calling Pool Water Specialists for advice.
